

AAA Digital Platform

Admin Guide

Org Admin & Charity Admin Reference

Document Type	Administrator Reference Guide
Version	1.0
Date	May 2026
Audience	Organisation Admins, Charity Admins (Super Admins)

This guide covers the administration panels for both **Organisation Admins** (managing one organisation) and **Charity Admins / Super Admins** (platform-wide management). For learner features, see the User Guide.

Contents

1.	Admin Roles Overview	Org Admin vs Charity Admin — what each can do
2.	Org Admin: Dashboard	Admin overview page and key metrics
3.	Org Admin: User Management	Creating, editing, and managing users
4.	Org Admin: Workshops	Scheduling and managing virtual sessions
5.	Org Admin: Announcements	Creating org-scoped announcements
6.	Org Admin: Document Library	Accessing the document library
7.	Org Admin: Reports	Viewing training and attendance reports
8.	Org Admin: Schools (Parent Orgs)	Managing child organisations
9.	Charity Admin: Platform Overview	Super admin dashboard
10.	Charity Admin: Organisations	Managing all organisations
11.	Charity Admin: Training Content	Programs, modules, lessons, interactive blocks, AI quiz generation, SCORM
12.	Charity Admin: Reports & Analytics	Platform-wide reporting
13.	Charity Admin: AI Prompts	Managing AI features
14.	Charity Admin: Document Library	Collections, uploads, targeting, AI thumbnails, download tracking
15.	Charity Admin: Announcements	Global and org-targeted announcements

1. Admin Roles Overview

The platform has two administrator roles with different scopes of access.

Organisation Admin (Org Admin)	Manages a single organisation: creates users, schedules sessions, publishes announcements, views org-level reports. Panel at /admin.
Charity Admin (Super Admin)	Platform-wide management: all organisations, training content, surveys, document library, AI prompts, global reports, and platform settings. Panel at /super-admin.
Charity Employee	Delegated charity-level access with specific permissions granted by a Charity Admin. Sees only the sections their permissions allow.

MFA (multi-factor authentication) is mandatory for both Org Admin and Charity Admin roles. On first login you will be directed to set up an authenticator app before accessing any admin features.

2. Org Admin: Dashboard

After logging in as an Org Admin you are taken to the admin dashboard at /admin. This shows an overview of your organisation's activity.

The screenshot displays the 'Organisations' section of the admin dashboard. On the left is a blue sidebar with navigation links: Overview, Feedback, Organisations (selected), Products, Reports, Subscribers, Users, and Settings. The main content area has a header with the 'Ambitious about Autism' logo, a 'Feedback' button, a moon icon, a notification bell with '10', and a user profile for 'Admin User Charity Admin'. Below the header, the 'Organisations' section is titled 'Manage all organisations on the platform.' and includes a '+ Create Organisation' button. A tab bar shows 'Organisations' (active) and 'Pending Approval'. A search bar is labeled 'Search by name or URL ID' with '1 of 1' results. A table lists one organisation: 'Independent Learners' (System), with URL ID 'independent-learners', 1 user, and an 'Active' status. The 'Created' date is '2 May 2026' and the 'Actions' column has a 'Manage' link. A 'How to use this page' section is partially visible at the bottom. A cookie notice at the very bottom states: 'This site uses essential cookies for authentication and security. No tracking cookies are used.' with links to 'Privacy Policy' and an 'Accept' button.

Name	URL ID	Users	Active	Created	Actions
Independent Learners System	independent-learners	1	Active	2 May 2026	Manage

Figure 1 — Org Admin dashboard

Key metrics shown:

- Total active users in your organisation.
- Training completion rates across assigned programs.
- Upcoming and recent session counts.
- Active announcements.

3. Org Admin: User Management

Manage all users in your organisation from the **Users** section.

Charity Users
Manage Charity Admin and Charity Employee accounts.

+ Add User

Search by name or email 3 of 3

Name	Email	Role	Permissions	Active
Jade Fuller	jfuller@ambitiousaboutautism.org.uk	Admin	Full access	Yes
Simon	admin@ms.com	Admin	Full access	Yes
Admin User You	admin@asdawareness.org.uk	Admin	Full access	Yes

How to use this page

This site uses essential cookies for authentication and security. No tracking cookies are used. [Privacy Policy](#) [Accept](#)

Figure 2 — User management

3.1 Creating a User

- Click **Add User**.
- Enter the user's name, email address, and select their role.
- Set a temporary password. The user will be prompted to change it on first login.
- Click **Create User**. A printable credential card with a QR code is offered.

3.2 Available Roles

Practitioner (CAREGIVER)	ASD training + full learner features.
Careers Professional (CDO)	Careers training, CV Builder, Careers Advisor, manages students.
Student / Intern / Employee	Training, CV Builder, Careers Advisor, Jobs.

3.3 Editing & Deactivating

Click a user's name to open their profile. You can change their name, email, role, and reset their password. Toggle **Active** off to deactivate an account — deactivated users cannot log in.

SSO users must be pre-created in the platform before they can log in via Google or Microsoft. Create the account first, then tell the user to use the SSO tab on the login page.

4. Org Admin: Workshops

Create and manage virtual classroom sessions for your organisation.

Figure 3 — Workshop management

4.1 Creating a Session

- Go to **Workshops** in the admin sidebar.
- Click **New Session**.
- Enter title, date and time, duration, platform (Zoom / Teams / Custom), and host.
- Select attendees: all org members, specific roles, or individual users.
- Paste a meeting link or use auto-generation if Zoom/Teams API is configured.
- Click **Create**.

4.2 Session Lifecycle

Scheduled	Session created, not yet started. Visible to attendees.
In Progress	Session is live. Attendees can join.
Completed	Session ended. Attendance can be marked; recording URL can be added.
Cancelled	Session cancelled. Attendees are notified.

To enable automatic meeting link generation, configure your Zoom or Teams API credentials at **Settings** → **Meeting Settings** in the admin panel.

5. Org Admin: Announcements

Announcements appear on learners' dashboards. Use them for important notices, reminders, or news relevant to your organisation.

Creating an Announcement

- Go to **Announcements** in the admin sidebar.
- Click **New Announcement**.
- Enter a title and body text.
- Optionally set an expiry date — the announcement disappears automatically after this date.
- Click **Publish**.

Announcements without an expiry date stay visible indefinitely. Delete or expire old announcements to keep learner dashboards clean.

6. Org Admin: Document Library

Org Admins can view the document collections published by the charity and targeted to their organisation. The super admin creates and manages collections.

Accessing Documents

- Click **Document Library** in the admin sidebar.
- Browse collections visible to your organisation.
- Click a document to view or download it.

If you need a new document collection published for your organisation, contact the charity's digital team (Super Admin).

7. Org Admin: Reports

The Reports section provides training completion and session attendance data for your organisation.

Available Reports

Training Completion	Per-user and per-module completion rates across assigned programs.
Session Attendance	Attendance records for each workshop session.
CV Builder Stats	Total CVs created, by status and template.
Careers Advisor	Total sessions started and completed.

Report data updates in real time as learners complete lessons and sessions.

8. Org Admin: Schools (Parent Orgs)

If your organisation is configured as a **Parent Organisation**, you will see a **Schools** link in your admin sidebar. This allows you to manage child organisations (e.g. individual schools within a multi-academy trust).

8.1 Creating a Child Organisation

- Go to **Schools** in the admin sidebar.
- Click **Add School**.
- Enter the school name, contact details, and select whether it should inherit settings (training programs, roles, feature flags) from your parent org.
- Click **Create**.

8.2 Managing Child Org Users

Users in child organisations can be managed from the parent admin panel. Select the child org from the dropdown at the top of the Users page.

Child organisations with **Inherit Settings** enabled automatically receive any training program or feature flag changes you make to the parent org.

9. Charity Admin: Platform Overview

The Charity Admin (Super Admin) dashboard at /super-admin gives a platform-wide view of all organisations, users, and training activity.

Figure 4 — Charity Admin dashboard

Sidebar navigation includes:

- Overview — platform summary stats.
- Users — all users across all organisations.
- Organisations — manage all orgs.
- Cohorts — cross-org user groupings.
- Document Library — create and target document collections.
- Training Content — manage training programs, modules, and lessons.
- Surveys — create and publish surveys.
- Announcements — global and org-targeted.
- Workshops — charity-level sessions.
- Job Openings — manage job listings.
- Reports — platform-wide analytics.
- AI Prompts — manage AI feature configuration.
- Settings — SSO, integrations, API keys.

The "Charity Admin" role is displayed in the UI as **Super Admin** internally, but shown to users as "Charity Admin" for the Ambitious about Autism context.

10. Charity Admin: Organisations

Create and manage all member organisations on the platform.

The screenshot shows the 'Organisations' management page. On the left is a blue sidebar with the 'Ambitious about Autism' logo and navigation links: Overview, Feedback, Organisations (selected), Products, Reports, Subscribers, Users, and Settings. The main content area has a header with 'Organisations' and a '+ Create Organisation' button. Below this is a sub-header 'Manage all organisations on the platform.' and two tabs: 'Organisations' (active) and 'Pending Approval'. A search bar 'Search by name or URL ID' is present. A table lists the organisations:

Name	URL ID	Users	Active	Created	Actions
Independent Learners System	independent-learners	1	Active	2 May 2026	Manage

At the bottom of the main area is a 'How to use this page' link. A cookie notice is at the very bottom: 'This site uses essential cookies for authentication and security. No tracking cookies are used.' with links to 'Privacy Policy' and an 'Accept' button.

Figure 5 — Organisation management

Key Actions

Create Org	Add a new member organisation with name, type, and contact details.
Assign Programs	Choose which training programs the org's users can access.
Set Roles	Restrict which user roles can be assigned within the org.
Feature Flags	Enable/disable CV Builder and Careers Advisor per org.
SSO Config	Configure per-org SAML SSO at the Enterprise SSO tab.
Deactivate	Deactivate an org to block all its users from logging in.

Training programs are managed at **Training Content** and then assigned to organisations. An org whose users see no training programs will have an empty sidebar.

11. Charity Admin: Training Content

All training content is managed from **Training Content** in the super admin sidebar. The hierarchy is: Training Program → Modules → Lessons → Quiz Questions. Only Charity Admins (and Charity Employees with the Manage Training permission) can create or edit content.

The screenshot shows the 'Training Content' management interface. On the left is a blue sidebar with the 'Ambitious about Autism' logo and navigation links: Overview, Feedback, Organisations, Products, Reports, Subscribers, Users, and Settings. The main content area is titled 'Training Content' with a subtitle 'Manage training programs, modules, and lessons.' and a '+ New Program' button. It displays a list of four training programs, each with expand/collapse arrows, a title, version, status, module count, description, and action buttons (Edit, View, and a chevron):

- ASD Awareness Training** (v1.0, Approved, Active, 5 modules): Autism awareness training for practitioners working with children and young people.
- Autism In The Workplace** (v1.0, Draft, Active, 1 module)
- Careers CPD Training** (v1.0, Approved, Active, 4 modules): Continuing professional development for careers professionals supporting autistic young people.
- AAA Digital Platform Technical Setup Training** (v1.0, Draft, Active, 6 modules): AI-generated training program

At the bottom, there is a cookie consent banner: 'This site uses essential cookies for authentication and security. No tracking cookies are used.' with links to 'Privacy Policy' and an 'Accept' button.

Figure 6 — Training content management

11.1 Content Hierarchy

Training Program	Top-level container. Has a name, description, status, and version. Assigned to organisations — only learners in an assigned org can access it. Appears as a named link in the learner sidebar.
Module	A chapter within a program. Has a title, description, and display order. Contains one or more lessons. Learners see module-level progress (% complete).
Lesson	A single piece of learning content. Can be Text, Video, or SCORM type. May include quiz questions, downloadable attachments, and interactive blocks.
Quiz Question	Multiple-choice questions attached to a lesson. Answers and correct answer are stored. AI can generate these automatically from lesson content.

11.2 Creating a Training Program

A Training Program is the entry point for all training content. Create one before adding any modules or lessons.

- Go to **Training Content** and click **New Program**.
- Choose **Blank Program** to start from scratch, **Generate from Files** to use AI to draft a full program structure from uploaded documents (PDFs or DOCX), or **Import SCORM** to scaffold a program from a SCORM zip package.
- Enter a **Name** (e.g. "ASD Awareness Training") and an optional rich-text **Description**. The name appears verbatim in the learner sidebar navigation.
- Set the initial **Status** to **Draft** while building.
- Click **Create Program**.

Generate from Files uses AI to read uploaded documents and draft a full program structure — programs, modules, lesson outlines, and quiz questions — in one pass. Review and edit everything before publishing. The AI will not invent facts; it works from the source material you provide.

11.3 Program Status Lifecycle

Programs flow through four statuses. Learners can only access **Approved** programs.

Draft	Work in progress. Not visible to learners. Edit freely.
Under Review	Ready for sign-off. Flagged in the admin list for review. Editing is still possible.
Approved	Live and accessible to learners in assigned organisations. Set this status once the program is finalised and assigned.
Archived	Retired. Hidden from learners. Historical progress data is retained.

A program must be both **Approved** and **assigned to the organisation** for its learners to see it. Do both steps before announcing the training.

11.4 Adding Modules

- Open the program and click **Add Module**.
- Enter a module title and optional description.
- The module appears in the program's module list. Drag the handle on the left to reorder modules.
- Click the module title to open it and add lessons.

11.5 Adding Lessons

- Inside a module, click **Add Lesson**.
- Enter the lesson title and choose its type (Text, Video, or SCORM).
- Drag the handle to reorder lessons within the module.
- Click **Edit** on a lesson to open the lesson editor.

Lesson Types

Text	Rich content with prose, images, interactive blocks, and quiz questions. Recommended for most lessons.
Video	Embed an external video URL (YouTube, Vimeo, or direct MP4). An optional text transcript can be added below the video.
SCORM	Upload a self-contained SCORM 1.2 or 2004 package (zip, max 200 MB). The platform extracts and hosts all assets, serves a multi-SCO table of contents if present, and tracks completion via the SCORM runtime.

11.6 The Rich Text Editor

Text lessons use a full WYSIWYG editor (Quill). The toolbar provides:

Headings / bold / italic / lists	Standard text formatting. Use headings to structure long lessons.
Image upload	Click the image icon in the toolbar to upload an image from your computer. Images are stored in Vercel Blob and embedded directly in the lesson.
Video embed	Click the video icon to paste a YouTube, Vimeo, or direct URL. The video is embedded as a responsive player.
Link	Highlight text and click the link icon to add a hyperlink. External links open in a new tab for learners.

11.7 Interactive Blocks

Below the main editor, a separate **Interactive Blocks** panel lets you add richer elements that sit within the lesson flow. Click **Add Block** and choose a type:

Carousel	A slide-show of image+text cards. Each slide can have its own audio narration (generated automatically by the text-to-speech engine when the lesson is saved). Use carousels to break a long topic into digestible slides.
Hotspot Image	Upload an image and mark clickable hotspot areas with labels. Learners click each hotspot to reveal a description or fact. Useful for anatomy diagrams, workplace layouts, or scenario illustrations.
Video Block	Embed a video within the interactive block flow (as distinct from the main editor video embed — use this when you want the video to appear mid-lesson between other blocks).
Rich Text	A standalone prose block with its own formatting. Useful for pull-quotes, definitions, or highlighted explanatory paragraphs between other blocks.

Interactive blocks are saved independently from the main rich-text body. Click **Save Blocks** after editing them. The platform automatically pre-generates text-to-speech audio for lesson and carousel text when you save, so learners hear instant playback without any delay.

11.8 Adding Downloadable Resources

Attach supplementary files (PDFs, handouts, reference sheets) to any lesson. They appear as a **Resources** download section at the bottom of the lesson page.

- Open the lesson editor and scroll to the **Attachments** panel.
- Click **Upload File** and select a PDF or image from your computer.
- Add a display label for the file.
- Click **Save**. The file is stored in Vercel Blob and linked from the lesson.
- To remove an attachment, click the delete icon next to it.

11.9 AI Quiz Generation

The platform can automatically generate multiple-choice quiz questions from any lesson's text content using the Gemini AI model. This saves significant time when building assessment questions for long lessons.

- Write and save the lesson body text first — the AI reads from what is already saved.
- Click **Generate Quiz Questions** in the lesson editor.
- The AI analyses the lesson content and returns a set of multiple-choice questions, each with 4 options and the correct answer pre-selected.
- A preview panel shows all generated questions. Review each one for accuracy.
- Edit any question or answer text as needed — the AI may occasionally paraphrase or miss nuance, so always review before publishing.
- Click **Save Questions** to add them to the lesson. Existing questions are not deleted — new questions are appended.
- To delete a question, click the trash icon next to it in the quiz editor.

If the AI returns an error or the questions look wrong, click **Retry** in the generation panel. Each retry is a fresh request — the model may produce different questions. For best results, ensure the lesson body is at least 200 words of clear, factual prose before generating.

11.10 Importing SCORM Packages

SCORM is a standard format for pre-built interactive e-learning packages. If you have existing SCORM content (e.g. from an authoring tool such as Articulate Storyline or iSpring), you can import it directly.

- From the Training Content list, click **New Program** → **Import SCORM**. Alternatively, within an existing lesson, choose type **SCORM** and upload there.
- Select your SCORM zip file (max 200 MB). The platform supports SCORM 1.2 and SCORM 2004.
- The package is extracted and all assets (HTML, JS, images, audio) are stored in Vercel Blob.

- If the package contains multiple SCOs (learning objects), a table of contents panel is shown to learners so they can navigate between them.
- Completion and quiz scores are tracked via the SCORM runtime and appear in reports alongside standard lesson progress.

SCORM content is served through an auth-gated proxy — learners must be logged in and assigned the correct program to access any SCORM asset. Do not share SCORM asset URLs directly; they require an active session.

11.11 Assigning Programs to Organisations

A program only becomes visible to learners once it is both **Approved** and assigned to their organisation.

- Navigate to **Organisations** in the super admin sidebar.
- Click the organisation you want to assign content to.
- In the **Training Programs** section, tick the programs to enable.
- Click **Save**. Changes take effect immediately — learners see the new program in their sidebar on their next page load.

To remove a program from an org, untick it in the organisation settings. Learner progress is **not** deleted — if the program is re-assigned later, their previous progress is restored.

12. Charity Admin: Reports & Analytics

The platform-wide reports page provides detailed analytics across all organisations.

Reports

Pick a section to view detailed reporting.

- Training Completion** > Module completion rates by organisation.
- SCORM Quiz Analytics** > Per-question correctness — surfaces material that needs updating.
- Gatsby Benchmarks** > Coverage of the 8 Gatsby Benchmarks across modules.
- Document Library** > Downloads across all document collections.
- Surveys** > Response rates and answer breakdowns.
- CV Builder** > CV creation activity by status and template.
- Careers Advisor** > All careers advisor session activity.
- Job Openings** > Published jobs and learner assignments.
- Revenue** > Purchases, subscriptions and recurring revenue.
- Usage & Reach** > Live platform usage and national reach projections.

This site uses essential cookies for authentication and security. No tracking cookies are used. [Privacy Policy](#) [Accept](#) ×

Figure 7 — Platform reports

Report sections include:

Training Completion	Per-org and per-module completion rates. Export as CSV.
Session Attendance	Attendance across all org workshop sessions.
CV Builder	CVs created by status, template, and per org.
Careers Advisor	Sessions by status and org.
Document Library	Download counts per document and per org.
Survey Results	Response rates and answer distributions.
SCORM Quiz Analytics	Per-question performance across all learners (anonymised).
Integration API	Usage of the external integration API.

Training reports use module names as configured in Training Content, not raw IDs.

13. Charity Admin: AI Prompts

All AI-powered features (quiz generation, CV suggestions, Careers Advisor report, survey insights, document thumbnails) are driven by prompts stored in the database. Manage them at **AI Prompts** in the super admin sidebar.

The screenshot displays the 'AI Prompts' management page. On the left is a blue sidebar with the 'Ambitious about Autism' logo and navigation links: Overview, Feedback, Organisations, Products, Reports, Subscribers, Users, and Settings. The main content area is titled 'AI Prompts' with a subtitle 'Tune the AI behaviours across the app. Changes apply to the next call.' Below this, prompts are organized into two sections: 'Careers Advisor' and 'CV Builder'. Each section contains cards for specific prompts, such as 'Careers Advisor — Report', 'CV Builder — Expand Interests', 'CV Builder — Improve Work Description', 'CV Builder — Personal Statement', and 'CV Builder — Rephrase Bullet Point'. Each card shows the prompt's description, a green 'Enabled' status, the model 'google/gemini-2.5-flash', and a 'Never edited' timestamp. At the bottom of the page, a cookie notice states: 'This site uses essential cookies for authentication and security. No tracking cookies are used.' with links to 'Privacy Policy' and an 'Accept' button.

Figure 8 — AI Prompt management

Prompt Fields

Key	Unique identifier used in code (do not change without code update).
Name / Purpose	Human-readable label and description.
Model	AI model to use (e.g. google/gemini-2.5-flash, anthropic/claude-sonnet-4).
Requirements	Bullet-point rules the AI must follow.
Response Format	Expected output structure (e.g. JSON schema or prose).
Context Files	PDFs or DOCX files prepended to the prompt for extra context.

All AI prompts instruct the model never to diagnose or suggest autism. They use UK English and are strength-focused by default.

14. Charity Admin: Document Library

The Document Library lets you publish curated collections of files — PDFs, Word documents, images, and reference materials — to targeted groups of learners. All files are stored securely in Vercel Blob and served through an authenticated proxy, so only intended recipients can download them.

Figure 9 — Document library management

14.1 What Is a Collection?

A **Collection** is a named folder of related documents. Examples might include "ASD Support Resources", "Employer Guidance Pack", or "Practitioner Toolkit". Each collection has a title, description, optional thumbnail image, and a visibility rule that controls which organisations and roles can see it.

From the learner's perspective, each collection they can access appears as an individual named link in their sidebar. Clicking it opens a document list at `/library?c=<id>` where they can view and download files.

14.2 Creating a Collection

- Go to **Document Library** in the super admin sidebar.
- Click **New Collection**.
- Enter a **Title** — this is shown in the learner sidebar and on the collection page. Keep it concise (3–6 words).
- Enter a **Description** — a sentence or two explaining what the collection contains and who it is for.
- Set **Target Organisations**: select one or more organisations, or leave blank to make the collection visible to all organisations on the platform.

- Set **Target Roles**: select one or more roles (e.g. Practitioner, Student), or leave blank to target all roles within the selected organisations.
- Click **Create Collection** to save the shell. You can now add documents.

Leaving both **Target Organisations** and **Target Roles** blank makes the collection visible to every learner on the platform. Use this only for genuinely universal resources.

14.3 Adding Documents to a Collection

Once a collection exists, open it and upload files one at a time or in batches.

- Click **Upload Document**.
- Select one or more files from your computer. Accepted formats: PDF, Word (.docx), PowerPoint (.pptx), Excel (.xlsx), plain text (.txt), and common image formats (JPG, PNG, GIF, WebP).
- Each file is uploaded directly to Vercel Blob storage. There is no enforced size limit per file, but keep individual files under 50 MB for reliable uploads on slower connections.
- A display name is automatically taken from the filename — click the pencil icon to rename it to something more readable (e.g. "Q1 2026 Employer Brief" instead of "employer_brief_v3_FINAL.pdf").
- To remove a document, click the delete icon. This removes it from the collection and deletes it from storage.

SVG files are blocked for security reasons (SVGs can contain inline scripts). If you need vector graphics, export as PNG or PDF before uploading.

14.4 AI-Generated Collection Thumbnails

Each collection can have a thumbnail image displayed on the collection card and in the library index. You can either upload your own image or let the AI generate one.

Generating a thumbnail with AI:

- Open the collection and click **Generate Thumbnail**.
- The platform sends the collection's title and description to the AI model (configured in AI Prompts) and requests a relevant, professional thumbnail image.
- Generation takes 5–15 seconds. A preview is shown once complete.
- If you are happy with the result, click **Use this thumbnail**. It is stored in Vercel Blob and immediately applied to the collection.
- If you want a different result, click **Regenerate** to request a new image. Each generation is independent — results will vary.
- To remove the AI thumbnail and revert to the default icon, click **Remove thumbnail**.

Uploading a custom thumbnail:

- Click **Upload Thumbnail** instead of Generate.
- Select a JPG or PNG image. Recommended size: 800 × 500 px (16:10 ratio).
- The image is stored in Vercel Blob and applied immediately.

The AI thumbnail uses the same AI prompt infrastructure as other platform features. The prompt key is **library_thumbnail** — you can edit the generation instructions at **AI Prompts** if you want to adjust the visual style or add brand guidance.

14.5 Editing an Existing Collection

You can edit a collection's title, description, target organisations, and target roles at any time. Changes take effect immediately for all users.

Org Admins can also edit the title and description of collections that are targeted to their organisation — they see an Edit button on the collection page in their admin panel. They cannot change targeting or upload/delete documents.

14.6 Download & View Tracking

Every time a learner views or downloads a document, the platform records a **LibraryDocumentEvent** with the timestamp, user, organisation, and document. This data feeds into the platform reports.

View	Counted when a learner opens the document in the browser preview.
Download	Counted when a learner downloads the file to their device.

See download counts per document and per organisation in the **Reports** → **Document Library** section.

14.7 How Learners See the Library

Collections are surfaced to learners in two places:

- **Sidebar navigation** — each visible collection appears as a named link directly in the left nav, below training program links. Clicking it goes to the collection's document list.
- **Library index page** (/library) — a full grid of all accessible collections with thumbnails and descriptions. Learners can also reach individual documents from here.

Documents are never served as raw Vercel Blob URLs. All downloads go through an authenticated proxy route, so changing visibility on a collection immediately revokes access for learners who are no longer in the target audience.

15. Charity Admin: Announcements

Post announcements visible to all users on the platform, or target them to specific organisations.

The screenshot shows the 'Global Announcements' section of the admin dashboard. On the left is a blue sidebar with the 'Ambitious about Autism' logo and navigation links: Overview, Feedback, Organisations, Products, Reports, Subscribers, Users, and Settings. The main content area has a header with a megaphone icon, the title 'Global Announcements', a subtitle 'Broadcast messages to all users across every organisation.', and a '+ Create Announcement' button. Below this is a table showing '0 announcements'. The table has columns: Title, Active, Expires, Created, By, and Actions. The table body is empty, displaying a 'No announcements yet.' message with a megaphone icon. At the bottom of the main area is a 'How to use this page' link. A cookie banner at the very bottom states: 'This site uses essential cookies for authentication and security. No tracking cookies are used.' with links to 'Privacy Policy' and an 'Accept' button.

Title	Active	Expires	Created	By	Actions
No announcements yet.					

Figure 10 — Announcements management

Creating a Global Announcement

- Go to **Announcements** in the super admin sidebar.
- Click **New Announcement**.
- Write title and body. Leave **Organisation** blank for a global announcement, or select specific orgs.
- Set an optional expiry date.
- Click **Publish**.

Global announcements (no org filter) appear on every learner's dashboard across all organisations. Use these sparingly for platform-wide news.
